## Recommended maintenance products for your Aquatic Play Unit

### Calcitrol™

- Low-PH concentrated ready-to-use formula removes calcium and hard water mineral deposits “White Haze”.
- Environmental and worker safe organic salt formula that chemically reacts to dissolve away white haze build-up.

### SlideDetergent™

- High-PH water-based technology that removes tough surface contaminants such as leaf stains, scum lines, bird droppings, acid rain and other unwanted surface residue.
- Biodegradable, no VOC's, petroleum solvents or paint damaging cleaning acids such as bleach or muriatic acid.

### SlideSoap™

- Low suds-foaming cleaner that gives water the properties to loosen surface contaminants on play structures and decks.
- Biodegradable, worker safe, no VOC's, PH neutral and can be used frequently without harming any surface.

### SlideWax™

- Unique synthetic polymer wax that seals and protects metal, fiberglass and PVC surfaces from chlorinated pool water.
- High melting point formula outlasts carnauba, car and marine waxes which turn cloudy from intense UV rays.

### SlideCompound™

- Micro-abrasive cutting system removes embedded oxidation, the first step prior to waxing all types of surfaces.
- Water soluble formula contains no wax, silicone or solvents leaving very little residue and easy to clean up.

## SERVICE PARTNERSHIP WITH

# SlideRenu®

Wear and tear on aquatic play units are a sign that kids are having a great time enjoying the variety of interactive fun and colorful features offered by Waterplay®. In addition, the damaging effects of chlorinated water and the intense UV rays from the sun will prematurely cause your aquatic play unit to look dull and weathered if not properly maintained. We recommend periodically having your play unit professionally serviced to keep it looking shiny, bright and safe for your guests.

To that end, we have partnered exclusively with **SlideRenu®** to handle all of our aquatic play unit and water slide maintenance and repair services. **SlideRenu®** proprietary aquatic maintenance products, coatings and services are often specified by municipalities, water parks, hotels, campgrounds, cruise ships and family entertainment centers throughout the US and Canada. Their technicians are experts in refurbishing aquatic play units, water slides, metal support structures, soft play features and replacing safety netting, impact pads and splash pad flooring. They have been trained to service all Waterplay® installations.

## Maintenance Services for AQUATIC PLAY UNITS

Chlorine water, UV rays and wear caused by riders are your aquatic play unit's biggest enemy. Over the years, safety netting stretches or is torn, anti-skid deck coatings wear away, scale build-up turns to a surface destroying acid, paint chips off hand rails and water slides get scratched. If these conditions are left unattended, they can negatively impact the attractiveness of your aquatic play unit and eventually become a safety hazard.

Our new line of DIY cleaning products from **SlideRenu®** are now available through your Waterplay® dealer. For services other than routine cleaning, we recommend you contact **SlideRenu®** for services such as:

- Installing new safety netting
- Replacing interactive play unit elements
- Professionally descaling and cleaning your aquatic play unit
- Polish/wax your aquatic play unit water slide
- Repair fiberglass surfaces
- Re-caulk leaky water slide seams

If your aquatic play unit is in need of a face-lift or re-theming, **SlideRenu®** can repaint it. They use their own proprietary chlorine-resistant and rust preventative primer, solid color top coat and clear high gloss sealer; ABC™ Primer, ColorShield™ and ChloraShield™.

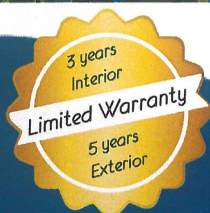

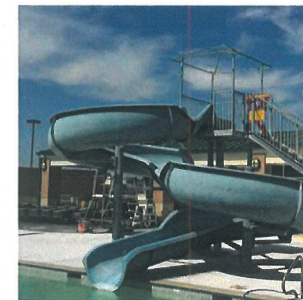

Every repainting project is backed by a 1-year workmanship warranty against delamination and a 3-year product warranty against excessive color fading, loss of gloss, surface rust and chalking. Their warranty is the longest in the industry.

## Maintenance and Resurfacing Services for WATER SLIDES

Water slide riding surfaces are constantly being bombarded by UV rays, chlorinated water, abrasion from riders and rafts, oily suntan lotions, acidic based sun screen creams and improper swim wear. Exterior water slide surfaces also fade and weather causing the overall appearance of your water slides to look dull, outdated and unappealing. Our new line of DIY water slide cleaning and waxing products from **SlideRenu®** is now available through your Waterplay® dealer.

If you don't have adequate staff to perform routine cleaning and waxing maintenance, **SlideRenu®** can develop a custom program to professionally descale, clean, polish, wax and re-caulk leaky seams. They can also perform major fiberglass repairs and, when the time comes, resurface or re-theme interior riding and exterior water slide surfaces. All resurfacing projects are backed by a 1-year workmanship warranty against delamination and a 3-year interior riding surface and 5-year exterior surface product warranty against excessive color fading, loss of gloss and chalking.

These turnkey services can enhance the curb appeal of your water park while keeping your guests safe so they can enjoy their ride experience **SlideRenu®**
